

Doc Dave

MPHYS NOTES

Introduction to Nuclear and Particle Physics'

Dave Scott

Based on a course by Prof. Mike Birse

July 4, 2018

Contents

Chapter 1

Basic Concepts

- 1.1 Quarks, Hadrons and Leptons
- 1.2 Strong, Electromagnetic and Weak Forces
- 1.3 Symmetries and Conservation Laws
- 1.4 Parity and Charge Conjugation
- 1.5 Feynman Diagrams and Exchange Forces
- 1.6 Decay Rates and Scattering Cross Sections
- 1.7 Quark Model for Light Hadrons
- 1.8 Parity Violation in the Weak Interaction

Chapter 2

Nuclei

2.1 Nuclear Forces

2.2 Nuclear Sizes

2.3 Semi-Empirical Mass Formula

2.4 Nuclear Stability

2.5 Alpha Decay

2.6 Shell Model

Chapter 3

Particles

3.1 Three Generations

3.2 Flavours and Flavour Mixing

3.3 Quark Model with Three Flavours

3.4 Heavy-Quark Hadrons

3.5 CP Violation

3.6 The Origin(s) of Mass
