

Doc Dave

MPHYS NOTES

Mathematics 2

Dave Scott

Based on a course by Prof. Helen Gleeson

July 4, 2018

Contents

Chapter 1

Integration with Multiple Variables

1.1 Scalar and Vector Fields

1.2 Line Integrals of Scalar and Vector Fields

1.3 Multiple Integrations

1.3.1 Volumes

1.3.2 Masses

1.3.3 Moments of Inertia

1.4 Use of Limits in Integrals

1.5 Methods of Evaluating Multiple Integrals

1.6 Surface Integrals of Vector Fields

4

1.7 Cylindrical and Spherical Polar Coordinates

1.8 The Jacobian Matrix

Chapter 2

The Operator and Vector Calculus

2.1 Definitions and Uses of the Gradient Operator

2.2 Directions of Greatest Increase

2.3 Constant Surfaces

2.4 Definitions of Divergence and Curl

2.5 Combinations of div, grad and curl

2.5.1 Theorems

2.6 The Laplacian

Chapter 3

The Divergence Theorem, Stokes' Theorem and Conservative Forces

3.1 Integral Expression for Divergence

3.2 The Divergence Theorem

3.3 Conservation Laws

3.3.1 The Continuity Equation

3.4 Integral Expression for Curl

3.5 Stokes' Theorem

3.6 Definition of a Conservative Field

3.6.1 Relation to Potentials

Chapter 4

Introduction to Fourier Series

4.1 Rationale for the Fourier Series

4.2 The Dirichlet Conditions

4.3 Orthogonality of Functions

4.4 The Fourier Coefficients

4.4.1 Symmetry Considerations

4.5 Applications of Fourier Series in Physics

4.5.1 Oscillation of a Wire

4.5.2 Diffraction of Light

4.6 Complex Representation of Fourier Series
