Doc Dave

MPhys Notes

Nuclear Physics

Dave Scott

Based on a course by Dr. David Cullen

July 4, 2018

Contents

Chapter 1

Basic Concepts of Nuclear Physics

Chapter 2

Sizes and Shapes of Nuclei

2.1 Measurements of Nuclear Mass and Charge Radii

2.1.1 Electron Scattering

2.1.2 Muonic Atoms

2.2 Electromagnetic Moments

2.2.1 The Hyperfine Structure

2.3 Nuclear Deformation

Chapter 3

Mechanisms of Nuclear Decay

3.1 α-Decay

3.1.1 Barrier Penetration

3.1.2 Geiger-Nuttall Systematics

3.1.3 Fragment Emission Relationship to Proton Heavy Nuclei

3.2 β-Decay

3.2.1 Fermi Theory

3.2.2 Selection Rules

3.3 γ-Decay

3.3.1 Multipolarity

3.3.2 Selection Rules

3.3.3 Decay Probabilities

Chapter 4

Excited States of Nuclei

4.1 Nuclear Shell Model

4.2 Collective Behaviour

4.2.1 Rotational States

4.2.2 Vibrational States

Chapter 5

Nuclear Reactions

5.1 Cross Section

5.2 Simple Features of Nuclear Reactions

5.3 Direct and Compound Nuclear Mechanisms

5.4 Fusion and Fission
